

Title

Pharmaceutical compositions based on Diclofenac

5 Abstract

New pharmaceutical compositions for oral use containing Diclofenac together with alkali metal bicarbonates in amounts of from 20 to 80 by weight with respect to Diclofenac are described. These compositions are entirely palatable and free from any unpleasant taste or other side effects; in particular, these formulations 10 permit to obtain in human patients higher C_{max} of the active principle and shorter T_{max} together with a lower coefficient of variation.
